

ANTIVIRUS MANAGEMENT POLICY

No. BAL/MIS/18-19/001; Date. 14-June-2018

This policy governs
the Anti-virus
installation &
management at BAL

4. Policy	3
a. Protection	3
b. Treatment	4
c. Software.....	4
5. Guidelines	4

1. Objective

The purpose of this policy is to protect the organizational resources against viruses.

2. Overview

This Policy governs the method used in BAL for the management of the anti-virus software used for the purposes of securing the BAL MIS systems environment from Viruses, Worms, Trojans, Malwares, Adware, Malicious Codes, etc. thereby protecting the Business/Digital Data.

3. Scope

This policy applies to all the servers, desktops, laptops, and workstations.

This policy also applies to all the employees, partners, contractors, consultants connecting their systems to the BAL network, locally or remotely.

All the digital transactions made on the BAL network viz file transfers, emails etc are also covered by this policy.

Exclusions: Peripheral systems like Printers, Scanners and CCTV cameras

4. Policy

a. Protection

1. MIS Service Desk and Security Management team will ensure that the Anti-virus software is installed and active on every machine (desktops, laptops, workstation, and servers).
2. The configuration of Anti-Virus software shall be protected to avoid any unauthorized modifications.
3. All diskette, CD and any removable storage media shall be scanned by an up-to-date anti-virus program before being used, wherever users/systems have permission to use them.
4. The contents from internet will be scanned automatically prior to download.
5. Any files or data obtained from outside through any media required for business, shall be scanned for virus before being used.
6. Anti-virus scans shall be done a minimum of once per week on all user-controlled workstations and servers.
7. No one 'should'/'should be' able to stop anti-virus definition updates and anti-virus scans except for domain administrators.

b. Treatment

1. In the event of virus outbreak, the virus-infected computers must be removed from the network until they are verified as virus free.
2. The anti-virus software must be configured to delete the related files and clean the affected areas where viruses, malware be encountered.

c. Software

The following matrix below represents the AV software installation construct/applicability.

Sr. No	Operating Systems	Antivirus Software
1	Windows	Yes
2	Linux	Yes
3	MAC	Yes

Sr. No	Application	Antivirus Software Version
1	Next Generation Antivirus	Min. Version expected on End Points and Server - (N*-2) Recommended version - (N*-1) N*Latest AV client software available from OEM

- No System would be introduced with a software on the network without an Anti-Virus conforming to the table above
- No additional software would be installed that is not approved by MIS
- No software would be installed without an anti-virus scan

5. Guidelines

MIS would ensure that Antivirus software is installed on all computers and antivirus definition is getting updated daily and is latest / up to date irrespective of computer is connected to office network or public internet through any media of connect to internet.

The minimum requirements that shall be implemented are:

1. Anti-virus product to be operated in real time on all servers and computers.
2. Definitions shall be updated at least once every day.
3. Full scan of all the servers and endpoints (D/L/W) must be done once a week.
4. Users should not be able to disable the anti-virus.
5. Email and attachments should be scanned & protected from viruses and malware.
6. Email should have additional protection for SPAM apart from the individual mailbox scanning against viruses and malware.
7. Email and other database may remain in exclusions based on the recommendation from the OEMs standards.
8. Real time virus, malware scanning and protection of email and internet (in /out network traffic).

Blocked Attachment Types

Certain predefined categories of the attachment should be blocked to mitigate the risk of virus. This is because some attachment types are commonly used by virus programs or malware to infect the computers. Below annexure lists the recommended blocked attachments.

Annexure I – Blocked Attachments

.ade	Access Project Extension (Microsoft)	.mdz	Access Wizard Template (Microsoft)
.adp	Access Project (Microsoft)	.msc	Microsoft Management Console Snap-in Control File (Microsoft)
.app	Executable Application	.msh	Microsoft Shell
.asp	Active Server Page	.msh1	Microsoft Shell
.bas	BASIC Source Code	.msh2	Microsoft Shell
.bat	Batch Processing	.mshxml	Microsoft Shell
.cer	Internet Security Certificate File	.msh1xml	Microsoft Shell
.chm	Compiled HTML Help	.msh2xml	Microsoft Shell
.cmd	DOS CP/M Command File, Command File for Windows NT	.msi	Windows Installer File (Microsoft)
.cnt	Help file index	.msp	Windows Installer Update
.com	Command	.mst	Windows SDK Setup Transform Script
.cpl	Windows Control Panel Extension (Microsoft)	.ops	Office Profile Settings File
.crt	Certificate File	.osd	Application virtualized with Microsoft SoftGrid Sequencer
.csh	csh Script	.pcd	Visual Test (Microsoft)
.der	DER Encoded X509 Certificate File	.pif	Windows Program Information File (Microsoft)
.exe	Executable File	.plg	Developer Studio Build Log
.fxp	FoxPro Compiled Source (Microsoft)	.prf	Windows System File
.gadget	Windows Vista gadget	.prg	Program File
.hlp	Windows Help File	.pst	MS Exchange Address Book File, Outlook Personal Folder File (Microsoft)
.hpj	Project file used to create Windows Help File	.reg	Registration Information/Key for W95/98, Registry Data File
.hta	Hypertext Application	.scf	Windows Explorer Command
.inf	Information or Setup File	.scr	Windows Screen Saver
.ins	IIS Internet Communications Settings (Microsoft)	.sct	Windows Script Component, Foxpro Screen (Microsoft)
.isp	IIS Internet Service Provider Settings (Microsoft)	.shb	Windows Shortcut into a Document
.its	Internet Document Set, Internet Translation	.shs	Shell Scrap Object File
